PROFESSIONAL SUMMARY

Results-driven Computer Engineer and Full Stack Software Developer with experience in software development, computational simulation, and technical research. Skilled in building scalable digital solutions and supporting engineering projects involving thermal simulations, data analysis, and Wire Arc Additive Manufacturing (WAAM). Passionate about innovation, advanced manufacturing, and applying technology to solve real-world engineering challenges.

WORK EXPERIENCE

Peatech Services, Cleveland, Ohio, USA (Remote). (May 2025 to Present)

- Contributing to engineering research and technical projects involving computational modeling, thermal analysis, and Wire Arc Additive Manufacturing (WAAM), including the development and analysis of simulation datasets for heat transfer and process optimization.
- Utilizing software development and analytical tools to support technical documentation, research reporting, data interpretation, and collaboration on simulation-driven engineering solutions for industrial and manufacturing applications.

Just Wallet *justwallet.com* Toronto, Canada (Remote). (Nov 2023 to April 2025)

- Led the development of responsive, user-friendly interfaces for justwallet.com, enhancing user experience across devices and platforms, and reducing bounce rates.
- Worked closely with a product manager, designer, and a couple of backend developers to integrate complex financial data and services into the frontend. Ensured alignment with business goals and compliance with industry standards.

EDUCATION

University of Benin, Benin City, Edo State (October 2015 to July 2021)

Bachelor of Engineering (B. ENG), Computer Engineering Department, Faculty of Engineering.

- Data Communication, Transmission media, Error detection and Error handling.
- Software engineering – Software programming, Instruction Set Architecture, Algorithm Implementation and design flow Computer Networking.
- Fuzzy Logic and Artificial Intelligence

Delta State Youth Resource Learning Center Sapele, Delta State (February 2020 to May 2020)

Computer Hardware Troubleshooting and Repairs

- Learned to perform routine maintenance on computers used for training sessions, including tasks such as utilizing software like "CCleaner" to clean up temporary files, optimize system performance, and ensure smooth operation during training sessions.
- Computer hardware training provided skills in efficiently replacing faulty system parts. Expertise was gained in identifying and handling defective components like CPUs, RAM, and hard drives.

SKILLS

- **Programming Languages:** HTML, CSS, JavaScript, PHP, Python, MySQL (Relational Database).
- **Frameworks & Technologies:** React, Laravel, REST APIs, Git/GitHub.
- **Engineering & Technical Skills:** Computational Simulation, Thermal Analysis, WAAM Research, ANSYS Simulation, Data Analysis, Programming & Algorithms, Cloud Computing (AWS).
- **Software & Tools:** ANSYS, Microsoft Excel, Word, PowerPoint.
- **Soft Skills:** Leadership, Teamwork, Critical Thinking, Problem Solving, Communication, Creativity, Public Speaking.
- **Content Writing:** Skilled in creating adaptive social media content and SEO-optimized articles for blogs and websites, with focus on clear, concise, and persuasive communication.
